

# Retrofit: Modem Exchange

For quick service, thanks to remote maintenance!

As no support for analog controls is granted any more, it is recommended to change to an up-to-date internet enabled router. When changing the modem further advantages will occur:

## FASTER SERVICE

In case of malfunctions the new router grants a quick and reasonable service. Our service staff is able to analyze the failure of the machine via remote maintenance and where required, solve the problem directly, or take care of all further necessary steps. Thus service charges might be saved.

## EASY CHANGE

The change of the old modem is very simple: We set up the modem according to your requirements, you install it into your machine and remote maintenance is available immediately.

## SECURE CONNECTION

Security is granted: The internet connection is built via VPN-tunnel. i. e. the modem is connecting itself with mbConnect Portal. There is no access to company networks as there is only one outgoing line.

Secure connection during remote maintenance, no access to company networks!
